WORK EXPERIENCE

Software Engineer | Backend Engineering

Aug 2025 — Present

Fuse Energy

London, UK

- Development on a Python monorepo handling core services including energy market messaging, vendor integration, customer billing and backoffice services.
- Led an architectural migration from SQS standard queues to FIFO with message grouping, to process core business events (e.g., customer billing) with ordering.
 - Designed a custom middleware gateway to bypass SQS FIFO strict TPS limits, allowing distributed publishers to scale while maintaining ordering guarantees.
- Executed a critical database migration to unify supply point IDs and market messages, consolidating Fuse's internal data across industry roles.

Software Engineer | Core Colo Engineering

Sep 2022 — Jun 2024

G-Research

London, UK

- Developed and deployed algo services to 20+ co-located datacenters, monetizing the trading platform within the Research Engineering function.
 - Included high-pressure daytime/overnight on-call shifts, debugging the messaging stack (Kafka, Aeron), service discovery (Consul), and deployment pipeline (ArgoCD).
- Driven by my market data volume analysis, led a project to adapt the trading stack for an alternative CPU architecture, enabling algo services to run alongside market data feed services.

Software Engineer Intern | Realtime Quant Tyburn Tactical

Jul 2021 — Sep 2021

G-Research

London, UK

Built an ASP.NET web app with Blazor UI to display development pipeline state of a crucial monolithic application required for trading, including regression test status and live production instance info.

Software Developer Intern

Jul 2020 — Aug 2020

Softwire

London, UK

- Worked with a 100k+ LOC codebase on a multiplatform (Kotlin, Swift) mobile app in production with 110k+ downloads.
- Built a supporting static site with React + Gatsby to onboard users.

EDUCATION

University of Cambridge

Cambridge, UK

MPhil Advanced Computer Science, Distinction 82.2%

Oct 2024 — July 2025

- Research project: Interpretability-driven Deep Learning on Raman Spectra for Cancer Diagnosis.
- Selected modules covered machine learning systems, large-scale data processing and optimisation, learning in the physical world, deep learning theory, and geometric deep learning.

University College London (UCL)

London, UK

BSc (Hons) Computer Science, First Class Honours

Sep 2019 — Jun 2022

A-levels

London, UK

Maths (A*), Further Maths (A*), Computer Science (A*)

2017 — 2019

PUBLICATIONS

Tomy, Chris, et al. "Modus: a Datalog dialect for building container images." **Proceedings of the 30th ACM Joint European Software Engineering Conference and Symposium on the Foundations of Software Engineering**. 2022. <https://doi.org/10.1145/3540250.3549133>

SKILLS

- **Programming Languages:** Python, C#, Bash, Java, Rust
- **Infrastructure & Tooling:** AWS (SQS, Lambda, RDS), uv, Docker, Git, CI/CD (GitHub Actions, ArgoCD)
